

# Using the Equation Module

A new “**Equation**” module is now available for users to include formatted mathematical equations in their e-Portfolios. With this new module users can add content in the form of LaTeX, MathML, and AsciiMath notations, which will be displayed as equations on the page once it’s published. (See *image 1.1*)

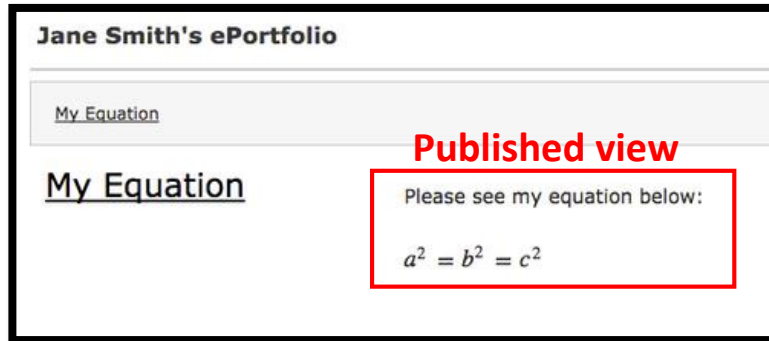

Image 1.1

1. Users can add the “**Equation**” module as they would a rich text or gallery module; by selecting “**Add a Module**” and then selecting the “**Equation**” module from the list. After selecting the “**Equation**” module, click the “**Add this Module**” button. (See image 1.2)

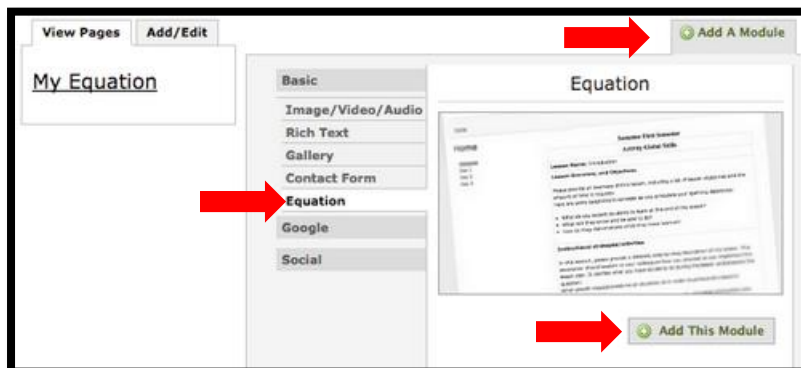

Image 1.2

2. When editing the equation module, the “**Preview**” will show users how the equation will look once it’s published after the closing tag (**\$**) has been applied. (See Image 1.3)

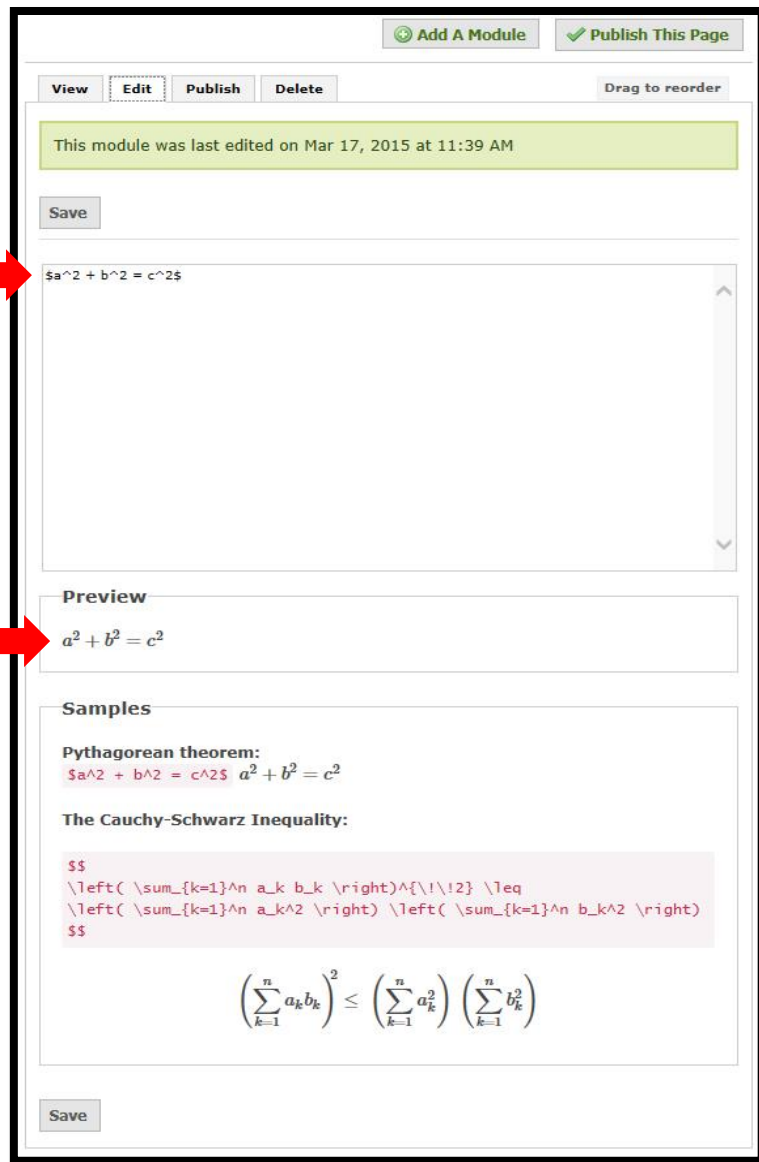

Image 1.3

3. Once finished make sure to “Save” and “Publish” the Module. (See images 1.4 and 1.5)
